

INVESTMENT: METEOR LANDS AT LANGHAM

The Langham Press, based just outside Cambridge, has installed the area's first MGI Meteor DP8700XL.

The machine was supplied via Print and Reprographic Services.

The company's David Arnold said, 'The obvious attraction of the MGI press is that it provides our customers with high quality reproduction. On top of that, however, it can print in sheet sizes and formats that were previously only available to us in litho form. Jobs designed to be six page A4 landscape or eight page A4 portrait, for example, work well on the Meteor. The machine can also print on to plastic, which again is unusual.'

David Arnold: 'This is the sort of capability that could open up new revenue streams for us.'
